## **The Language Register of Network Language in the Horizons of New Media**

**Zhang Yingwei**

**Abstract:** Language registers, a system of language use to meet the communicative need, carry distinct features of the times. A network language register is a new medley language register combining spoken and written styles in the context of new media network to achieve information exchange. Register imitation, cross-register writing, and netizens' age span reveal the diversity of network language register; penetration and blending promote the medley; the interactive response mode of digital texts differentiates network language register from paper texts, endowing it with dynamics.

**Keywords:** network language; diversity; medley; dynamics
